Banking Domain

Problem:

Develop a basic understanding of risk of analytics in banking, financial services and understand how data is used to minimize the risk losing money while lending to customer.

Solution:

With our dashboards which are created using Power BI latest tools helps the company to make a decision based on the applicant's profile like if the applicant is likely to repay the loan then approving the loan otherwise not.

About Dataset:

This dataset basically contains information about bank details, various client details which consists of multiple tables which are interlinked with each other through keys like primary key and foreign key.

The various tables are Banking Relationship, Client-Banking, Gender, Investment Advisor and Period.
